

# How To Prevent Cats and Other Pets From Setting Off Security Motion Alarms

Although a pet can be a valuable companion and provide many benefits for your home, it can also add new frustrations to your life. One of these frustrations can be that your new pet is setting off your security motion alarms. Usually, dogs and other common household pets that stay close to the floor won't be a problem, but when it comes to cats, it's a different story. This is because cats are known for climbing to high locations and can easily disturb security sensors in elevated areas, versus dogs, who are more content to stay close to the ground where they'll be less apt to set off your alarms. Your security system can be programmed so that it'll only be set off if it detects motion below a certain point, but this isn't helpful when you have pets that can easily reach any location.

The easy solution for this dilemma may seem to teach your pets not to reach these locations, but anyone with experience with animals knows they can be stubborn. So although it may be easy to have the idea to train your pets to keep away from your security systems, it's often a different matter when it comes to getting the job done. The good news is that sometimes the solution isn't to change the animal.

Read on if you're wondering how to prevent cats and other pets from setting off security motion alarms. In this article, we'll look at how you can stop the frustration of your pets setting off your alarms.

## Consider Pet-Friendly Motion Sensors

Pet-friendly motion detectors are a type of security system that can detect movement in a home or business without being triggered by pets. These detectors use special sensors designed to detect the size and shape of a human, as opposed to a pet, so they can distinguish between the two. They help provide an extra layer of security, as they can detect an intruder while ignoring the presence of a pet. Additionally, these detectors can monitor activity in the home, such as when a pet is left alone for a while. This can be useful for ensuring your motion detector isn't set off by pets and for pet owners who want to ensure their pet is safe and secure while away.

## Try Adjusting The Motion Detector

One way to adjust the motion detector so cats are less likely to trigger it is to adjust the sensor's sensitivity. By setting the sensitivity to a lower level, the detector will be less likely to pick up on small movements like a cat walking by, and you can adjust the range of the sensor so that more significant actions only trigger it. This will help to prevent cats from setting off the alarm. Finally, you can adjust the angle of the detector so that it is not facing directly toward the area where

your cats are likely to be. This will help reduce the chances of your cat setting the motion detector off.

## You Can Use Motion Detectors and Keep Your Pets

Motion detectors and pets can coexist peacefully so that you can keep your pets. By taking some simple steps, you can reduce the chances of your motion detectors being triggered by your pets. First, as mentioned above, you can adjust the motion detector's sensitivity to minimize the chances of it being triggered by small movements. You can also place the motion detector in a spot that is out of your pet's reach, such as on a high shelf. If you think it's possible, you can even try training your pet to stay away from the motion detector, which can help reduce the chances of it being triggered. With a little bit of effort, it is possible for motion detectors and pets to get along and for your sensors to stop getting triggered quickly.

## It's Important To Make Sure Your Motion Detectors Are Installed Properly

It is essential to set up motion detectors properly, so they don't get triggered easily. This is because false alarms can be costly, time-consuming, and a nuisance to neighbors and other people in the area. Moreover, if motion detectors are triggered too often, it can lead to a lack of trust in the system, and people may become complacent and not take the necessary precautions when the alarm goes off. Properly setting up motion detectors will ensure that they are only triggered when essential and that people can trust the system when it goes off.

## Let The Professionals Handle It For You

True Protection offers only the highest quality security equipment that will work effectively for any security need. This top-quality security equipment will be sure to work and alert you of any threats to your home. More importantly, you can involve professionals to ensure that your security is set up perfectly in each location. At True Protection, you can find pet-friendly motion detectors that aren't only effective at protecting your home but also allow you to keep your home pet friendly. Contact our team at True Protection to learn more!
